## **DETAILED ACTION**

(Note that as of October 1, 2002 a new **Art Unit 2655** was established that includes this application, and that this new AU number should be used in all future correspondence.)

### ***Information Disclosure Statement***

1. The listing of references in the specification (pages 1-3) is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Specification***

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification, such as:

- "Speech" is misspelled (9<sup>th</sup> line page 2).
- The terms "aperiodic" (3<sup>rd</sup> line from end, page 2), "nonperiodic" (8<sup>th</sup> line, page 3) and "non-periodic" (2<sup>nd</sup> paragraph, page 9) are used indiscriminately, where the

Art Unit: 2655

definitions are the same. To avoid errors of misunderstanding, either standard terminology must be used or the differences explained.

The Examiner is proceeding with the understanding that all variations have the same meaning (*adj. – irregular: happening at irregular intervals*).

- The grammatical number is not is agreement (page 4, 1<sup>st</sup> sentence, 2<sup>nd</sup> paragraph).
- Characterizing the drawings as *heuristic* (mid-page 4) requires explanation.
- The quantization for *fpitch* is missing (“[ ]” in 2<sup>nd</sup> line from end, page 14).
- “Zero<sup>th</sup>” should be superset (5<sup>th</sup> line from end, page 18) or otherwise reformatted.
- *Left-* and *right-handed* should be hyphenated (7<sup>th</sup> & 8<sup>th</sup> line, page 29).
- Hyphens should be used (2<sup>nd</sup> paragraph, page 33), as the underscore is an editing character.

Appropriate correction is required.

3. The abstract of the disclosure is objected to because the sentences are not complete. Correction is required. See MPEP § 608.01(b).

### ***Claim Objections***

4. Claim 1 is objected to because of the following informalities:

- In claim 1, the comma should be removed from after the word “and” (2<sup>nd</sup> line).

Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Thyssen (U.S. Patent 6,480,822) in view of Kim et al ("On A Modified Cepstral Pitch Control Technique For The High Quality Text-To-Speech Type System", Midwest Symposium on Circuits and Systems, pages 616-619, August 1998).

7. Regarding claim 1, the low complexity random codebook of Thyssen applies to the features as follows:

- Thyssen (column 6 lines 47-48) reads on the feature of (a) *a linear prediction* (column 9 line 27), *pitch* (column 10 line 1) and *voicing analyzer* (column 12 line 46).
- Thyssen (Abstract, line 9) acknowledges the use of *waveform coding* but expresses reservations without specifying those modifications that would overcome the stated deficiencies.

Kim et al (from the 5<sup>th</sup>-line from bottom of left column of page 616, to the 3<sup>rd</sup> line of the adjacent right column) reads on the feature of *(b) a waveform coder coupled to said analyzer*, which would have made it obvious to a person of ordinary skill in the art of speech signal processing at the time of the invention to apply the method/teachings of Kim et al to the device/method of Thyssen so as to provide toll-quality speech based on accepted coding methods.

- Thyssen (column 9 lines 58-65) reads on the feature of having *LP coefficients updated within a sub-frame for excitation synthesis*.

### **Conclusion**

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Manjunath et al (U.S. Patent 6,456,964) provides a hybridized speech encoder with the features of the immediate application.
- Udaya-Bhaskar et al (U.S. Patent 6,418,408) describes the combined features of the immediate application as being advantageous to speech coders.
